EXPERIENCE - [PERSONAL PROJECTS]

E-Commerce Store (Deployed locally, [E-Shop video link](#))

E-Commerce Front End ([Git repo](#)). E-Shop Application is an online store to buy products. The visitors can browse products, view products details. The application provides essential features such as User Registration and Login, allowing registered users to access their profiles, manage their accounts, view their orders, and purchase products. It is built using Typescript, Next-JS, Tailwind CSS. *E-Commerce Back End* ([Git repo](#)). The application includes features such as Login/Logout functionality, and the ability to Add, Edit, and Delete Product Categories and Products with pictures, descriptions, attributes, and assigning them to relevant categories. Product images stored on Cloudinary for efficient cloud-based media management. It is built using Strapi, Cloudinary and PostgreSQL.

Little Lemon ([Git repo](#), [Visit site](#))

A simple front-end page of Little Lemon restaurant. It is built using React. Users can browse available tables, select a date and time, and provide details about the occasion.
